

CATALYST

We are the catalyst of your digital sovereignty

Family And Individual Cybersecurity Sovereignty

RATE PLAN OVERVIEW

Overview

The Digital Empress MSSP X The Stem delivers world-class digital protection for everyday individuals, families, VIPs, and entrepreneurs. A team with decades of combined cybersecurity and IT experience, they started by protecting their own families from digital threats. From there, they have safeguarded everything from individuals to Fortune 500 companies & government systems, gaining deep insight into what true cybersecurity requires.

Our team's expertise has been recognized across the cybersecurity industry. They've participated in voting village & workshops at DEFCON, served as a trusted Apple Value Added Reseller, and earned multiple industry certifications. This blend of practical experience and industry recognition ensures that when you choose The Digital Empress X The Stem, you're not just getting protection — you're getting a team whose skills, credibility, and dedication have been validated at the highest levels of the tech world.

The Catalyst Bundle was designed because cyber criminals don't discriminate. Everyone, from busy parents to solo entrepreneurs, deserves proactive, reliable digital protection — not just corporations. Catalyst makes powerful cybersecurity personal, tailored, and always on.

We bring enterprise-grade protection to individuals effortlessly, giving you the freedom to live, work, and connect online with complete confidence.

Catalyst Plan Overview

This plan is for individuals, founders, & families ready to invest into the security of their digital sovereignty. We believe everyone should have access to enterprise cybersecurity protection because cyber criminals don't discriminate who they choose as their target. Our comprehensive protection is detailed below.

Phishing & Scam Protection

Phishing thrives in disguise — messages that look familiar, links that feel safe, and urgency that clouds judgment. It's the art of imitation turned into exploitation.

These threats exploit the gaps in our digital awareness, creating openings where none should exist. Our security systems cut through that illusion, reading between the lines of digital communication to reveal what's real and what's masquerading as it.

Behind the automation, there's empowerment. We help you build digital intuition — a practiced awareness that recognizes manipulation even when it looks convincing. Think of it as security through discernment — defending your digital space not just with filters and firewalls, but with a clearer sense of truth.*1

Virus & Malware Protection

Every device in your digital world mirrors the human body — responsive, adaptive, and capable of healing. Our protection suite works like an immune system for your technology, detecting harmful code and irregular behavior before damage occurs. It learns from new threats, strengthens its defenses, and restores balance automatically.

It's not just antivirus software — it's digital immunity that keeps your environment healthy, secure, and capable of evolving with the world around it.

Cloud Backup & Protection

The cloud expands your reach — connecting your work, your team, and your ideas. But with every connection comes greater responsibility for what's shared.

Our system acts like awareness in motion, continuously scanning for files or folders that drift beyond your circle of trust. When something's exposed, we help you close the gap, restore protection, and preserve the integrity of your digital space.

It's not just cloud security — it's digital mindfulness, ensuring your information stays safe, intentional, and exactly where it belongs.

Identity Theft Protection

Your digital identity is the reflection of who you are in motion — shaped by every login, session, and trace of data that connects you to the world.

We continuously monitor this landscape, recognizing subtle shifts that signal compromise before it takes root. If your credentials are stolen or your accounts are accessed without permission, we act quickly to contain the breach and restore integrity.

This is authenticity safeguarded — protecting not just your information, but the continuity of your digital self, so your identity remains wholly and unmistakably yours.*1

Dark Web Monitoring

Beneath the surface of the internet exists an unseen world — a shadow network where stolen data quietly trades hands. Our monitoring works like intuition for your digital identity, sensing when something feels off long before it reaches the surface.

By scanning these hidden spaces, we detect exposed credentials and alert you instantly so you can secure your accounts and take action.

It's not about fear — it's about awareness. We bring light to the unseen, helping you stay grounded, informed, and fully in control of your digital presence.*1

Network Monitoring

Your network is the nervous system of your digital life — every device, connection, and signal playing a part in its flow.

Our monitoring solution acts as a guardian presence, sensing changes in rhythm and alerting you when something feels off. From phones to computers, we keep watch for irregular patterns that could signal intrusion or instability.

This is secure connectivity in motion — intelligent, responsive, and designed to keep your digital environment flowing freely without interruption or uncertainty.

1. These services require an email address associated with a Google Workspace or Microsoft 365 account, or custom domain hosted by those services.

Cyberawareness Training

Empowerment begins with awareness. Our cyber awareness training helps you sharpen your instincts — learning to recognize digital deception, social engineering, and subtle manipulation before they gain a foothold. Each lesson builds intuition and discipline, turning curiosity into confidence and everyday users into mindful defenders.

This is security consciousness in practice — transforming awareness into action so your people become the strongest layer of your defense, both online and off.

Emergency Incident Response

When the unexpected happens, clarity and calm make all the difference. Our Emergency Incident Response team acts as your digital first responder — isolating issues, analyzing what went wrong, and guiding your system back to harmony. Each step is rooted in precision, transparency, and care.

We offer resilience in real time — restoring stability while strengthening your defenses, so each incident becomes an opportunity to evolve rather than just recover.

Consumer Software Vs. Catalyst

Most modern attacks have evolved beyond traditional malware. Today's attacks leverage advanced techniques including AI-powered exploits and advanced code specifically engineered to bypass antivirus detection. That's why the majority of real-world breaches today don't trip consumer security at all — they don't look dangerous until it's too late.

Our Catalyst plans offer Enterprise class cybersecurity protections to everyday people who otherwise would only be able to access basic software such as Norton, read below to see how this advanced security keeps you safe.

Beyond Traditional Antivirus

Traditional antivirus software like Norton, Malwarebytes, and McAfee can only recognize threats that exist in a defined state—known viruses with documented signatures.

Catalyst operates differently, by analyzing threat behaviour in real-time, we detect and neutralize attacks at the moment of emergence—before they collapse into damage. Protection that operates beyond linear threat detection—defending across entangled digital weak spots in your devices in real-time.

Specialized Phishing Protection

Traditional email security acts like a bouncer, blocking only known threats from a blacklist—static and reactive. Our behavioural analysis, however, detects intent: linguistic patterns, social engineering tactics, and contextual anomalies that signal potential danger—even from legitimate-looking senders. Sophisticated attacks don't announce themselves; they hide until detected by advanced intelligence that goes beyond surface-level scanning.

We don't wait for threats to be cataloged—we predict and prevent them as they emerge, stopping phishing attempts that haven't even been identified yet.

Human Lead Response Team

With consumer software a threat emerges, and you're handed an alert & left to figure it out alone. Catalyst connects you to living intelligence a team of security operators who respond in real-time, entangled with your security posture the moment an anomaly appears. Our response team doesn't just monitor—we observe, analyze, and collapse threats at the quantum level of your infrastructure. While consumer software generates alerts and walks away, our human-led intelligence isolates malicious activity, neutralizes threats, and restores security before damage materializes.

Plus, our professional help desk operates as an extension of your awareness—reach out with any security or IT concern, and our team responds with solutions, not just suggestions. Because true protection requires conscious intelligence, not automated notifications.

Advanced Network View

Consumer ISP security stands at your networks perimeter, checking credentials at the door. Catalyst operates as an entangled immune system—distributed intelligence that exists simultaneously at every node of your network, inside and outside, monitoring the entire organism in real-time.

Like killer-T cells identifying and neutralizing invaders, our network view detects behavioural anomalies, isolates threats, and collapses malicious potential before it manifests—whether attacks originate externally or emerge from compromised internal systems. Sophisticated threats don't announce themselves at the door—they disguise themselves as legitimate traffic.

Catalyst For Entrepreneurs

Your business isn't like everyone else's—so why would your security? You don't have a full IT department; and with Catalyst, you don't need one.

Our team delivers intelligent threat monitoring, compliance management, and real-time protection—all managed for you. Focus on revenue, product, and growth while we handle HIPAA, PCI-DSS, SOC 2, ISO 27001, and GDPR compliance.

When you're creating something new, you need security that keeps up and understands where you're going - automatically. Because entrepreneurship operates in the space between what is and what could be.

Catalyst protects both states simultaneously—securing your current operations while anticipating your next evolution.

Our Catalyst rate plan includes a great deal of robust cybersecurity services to keep you and your family safe, but The Digital Empress X The Stem also offers a great number of other cybersecurity related services.

Catalyst Included Services

- Phishing & Scam Protection
- Identity Theft Detection & Protection
- Virus & Malware Protection
- Dark Web Monitoring
- Cloud Backup & Protection
- Network Monitoring and Detection
- Cyber Awareness Training
- Emergency Incident Response

Add-On Services

- Phishing & Scam Awareness Training
- Step-in Support for Phishing Problems
- Cleaning Up Sensitive Data Exposed Online
- Setting Up Custom Security Rules
- Ransomware & Dangerous App Protection
- Find & Remove Unknown Devices on Your Network
- Assistance With Cloud Account Breaches
- Post Incident Computer Investigation
- Website Security Investigation
- Website SEO Attack Investigations
- Online Security Investigation
- Outsider Threat Investigation
- Digital Background Checks
- Threat Intelligence Operations
- Network Security Testing

Packages Available

	Tier 1	Tier 2	Tier 3	Tier 4
Devices Monitored - computers, phones or tablets.	2	4	8	16
Emails Monitored - Gmail and Exchange 365.	1	4	8	16
Support Tickets - Contact us in case of trouble.	2	4	8	16
Phishing Email Checks - Verify an email is legitimate with you.	4	8	16	32
